

WERECON Inc.

Model Series Overview

W1-Series (AKA Microject)

The W1-Series Microject is a small fertigation system that supports proportional injection for 1 solenoid type pump. The available pumps are size 1, 2, and 3, in .6, 1.0, and 5.4GPH respectively. This system runs on 110VAC, and is not expandable for additional pumps. The standard configuration includes a water flow sensor. This system is ideal for parks, schools, and small commercial properties.

Includes: System, Install Kit, Flow Sensor.

W2-Series (AKA Solar Microject)

The W2-Series Solar Microject is exactly the same as the W1 Series above, but instead of operating on 110VAC, it operates from power supplied by its included batteries and solar array.

Includes: System, Install Kit, Flow Sensor, Solar Array, Batteries.

W3-Series Stand Alone 1 Pump Fertigation System **\$6,661 - \$8,702**

The W3-Series Fertigation System is a larger stand alone proportional system. It supports 1 motor driven pump using VFD technology to control its output. The W3-Series uses 4-9 size pumps, and is well suited to basic fertigation of medium to large properties including golf courses. Despite the fact that this system supports only one pump, pump sizes 7,8, and 9 have 2 heads and can inject 2 products. This fact should be considered when choosing a tank package. This system runs on 110VAC and requires a flow sensor if one is not already present.

Includes: System, Install Kit.

W4-Series Green Scorpion Based Fertigation System **\$6,039 - \$25,875**

The W4-Series Fertigation System is a complete multi-pump, multi-injector proportional fertigation system. This system incorporates our exclusive Green Scorpion controls for the maximum in flexibility and user features. This system supports up to 3 pumps in sizes 3-9. Many different configurations are possible. This system runs on 110VAC, and requires a flow sensor if one is not present.

Includes: System, Install Kit.

W6-Series Green Scorpion Based pH Control/Fertigation System **\$7,708 - \$32,500**

The W6-Series takes the basic features of the W4 series, and builds on it by adding a 4th pump and pH sensors for direct-inject pH control using urea-sulfuric fertilizers. This system also incorporates the proprietary WERECON Adaptive-Auto-Adjust System for unsurpassed pH performance.

Includes: System, pH Sensors, Install Kit.

W7-Series Cyberject pH Control/Fertigation System **\$15,455 - \$38,543**

The W7-Series is WERECON's premier pH control system. Utilizing Cyberject technology, pH control can be achieved using almost any type of acid. Beyond this, all other features are similar to the W4/W6 series. System runs on both 480VAC 3 phase, and 110VAC and requires a flow sensor.

Includes: System, pH Sensors, Install Kit.

W8-Series Wet Well pH Control/Fertigation System

The W8-Series is the predecessor to the W7-Series. It incorporates most of the features of the W7-Series, but treats water in the wet well. It is currently being phased out by WERECON, but is still made available for certain circumstances. If you believe that you have a use for this system, please contact WERECON to discuss details and obtain pricing.

W9-Series Cyberject Fertigation System **\$15,200 - \$25,500**

The W9-Series Cyberject Fertigation system is the most accurate fertigation system in the United States. It offers up to 3 injectors and incorporates a state of the art control system. This system should only be recommended to customers with the technical proficiency to properly maintain and operate this system. The W9-Series operates on 480VAC 3 phase.

Includes: System, Install Kit.
